Absolutely. I'd make this **GitHub-first**, so the website treats your existing repository as the underlying evidence corpus rather than creating a separate copy of everything.
Below is a master command you can give to a GitHub-connected coding agent. It is deliberately structured to **build incrementally**, preserve existing evidence, and avoid presenting allegations as established crimes or corruption.

GITHUB FORENSIC ARCHIVE — MASTER BUILD COMMAND V1

ROLE

Act as an impartial senior software architect, forensic information architect, digital archivist, research-methodology designer, accessibility specialist, SEO engineer and academic publishing systems developer.
Build a complete, professional, publicly accessible digital archive and research website for:
Dr Richard William McLean / Barran Dodger
The website must transform the existing GitHub repository and its documentary corpus into a searchable, navigable, evidence-based digital archive, research library, forensic evidence centre, digital museum, publication platform and public-interest documentation portal.
The system must be designed so that a reader can independently inspect the underlying documents and distinguish:

- DOCUMENTED FACT
- PRIMARY-SOURCE RECORD
- OFFICIAL RECORD
- JUDICIAL FINDING
- OFFICIAL DETERMINATION
- CORROBORATED MATERIAL
- AUTHOR'S ACCOUNT
- ALLEGATION
- INFERENCE
- INTERPRETATION
- POSSIBLE LEGAL CHARACTERISATION
- UNVERIFIED MATERIAL
- DISPUTED MATERIAL
- RESEARCH QUESTION

Never silently convert an allegation, inference or interpretation into a fact.

---

1. SOURCE REPOSITORY

Primary repository/site:
https://drbarrandodger.github.io/barran-dodger-archive/
Primary archive mirror:
https://wezzo72.github.io/Backup/

Related public projects that may be linked where appropriate:
https://barrandodger.com
https://economicjusticeengine.com
https://economic-justice-engine.replit.app
https://mclean-digital-vault.base44.app
Do not assume that every URL remains active.
Verify links before publishing them.
Do not fabricate missing documents, citations, statistics, legal findings, publications, awards, institutional decisions or corroboration.

---

2. FIRST PRIORITY — PROTECT THE EXISTING EVIDENCE

Before changing anything:

1. Inspect the entire repository structure.
2. Identify the existing application, static files, PDFs, images, Markdown files, JSON, CSV, HTML, JavaScript, TypeScript and other assets.
3. Identify existing GitHub Pages configuration.
4. Identify existing routes.
5. Identify existing evidence directories.
6. Identify duplicated files.
7. Identify broken links.
8. Identify metadata already present.
9. Identify blockchain/timestamp/hash information already present.
10. Identify existing indexes and catalogues.
11. Identify files that should not be publicly exposed.
12. Create a machine-readable inventory before restructuring anything.

DO NOT delete existing evidence.
DO NOT rename evidence files merely for aesthetic reasons.
DO NOT overwrite original evidence.
DO NOT modify the contents of primary-source documents.
If restructuring is necessary, preserve the original path/reference in metadata.
Create an archival principle:
ORIGINAL EVIDENCE MUST REMAIN PRESERVED; WEBSITE PRESENTATION MAY CHANGE, BUT THE UNDERLYING RECORD MUST NOT BE ALTERED.

---

3. BUILD STATUS SYSTEM

Create:

`/spec/BUILD_STATUS.md`

At the beginning of every build session:

1. Read BUILD_STATUS.md.
2. Inspect the existing project.
3. Determine what has already been completed.
4. Continue from the existing state.
5. Never rebuild completed architecture unnecessarily.

After every meaningful build:

- update BUILD_STATUS.md
- record completed work
- record files created/modified
- record unresolved errors
- record next recommended phase

Never restart the project from zero unless explicitly instructed.

---

4. MASTER SPECIFICATION DIRECTORY

Create:

`/spec/`

with:

- MASTER.md
- ARCHITECTURE.md
- DATA-MODEL.md
- EVIDENCE-STANDARDS.md
- RESEARCH-METHODOLOGY.md
- LEGAL-CAUTION.md
- FORENSIC-METHODOLOGY.md
- IMPORT-PROTOCOL.md
- ARCHIVE-PROTOCOL.md
- SEO.md
- ACCESSIBILITY.md
- PRIVACY.md
- DESIGN-SYSTEM.md
- BUILD_STATUS.md

These documents should explain how the website works and preserve methodological transparency.

---

5. WEBSITE PURPOSE

The finished website should function simultaneously as:

1. Digital museum
2. Digital library
3. Documentary archive
4. Research repository
5. Evidence index
6. Forensic research centre
7. Publication library
8. Art portfolio
9. Biography
10. Academic repository
11. Whistleblower testimony archive
12. Human-rights documentation centre
13. Legal/research reference system
14. Timeline
15. Evidence graph
16. Public verification portal
17. Searchable document database
18. Download centre
19. Media archive
20. Public-interest information portal

---

6. CORE NAVIGATION

Create a professional navigation structure containing:

HOME
ABOUT
BIOGRAPHY
ART
BOOKS
ACADEMIC WORK
PUBLICATIONS
MEDIA
VIDEOS
WHISTLEBLOWER ARCHIVE
DOCUMENT ARCHIVE

FORENSIC EVIDENCE CENTRE
TIMELINE
EVIDENCE GRAPH
LEGAL & HUMAN RIGHTS
ETHICS & TREATIES
ALLEGED WRONGS & CRIMES — EVIDENCE INDEX
INSTITUTIONS & DECISION-MAKERS
FRAUD — CONCEPT & EVIDENCE ANALYSIS
FINANCIAL IMPACT
ASYLUM / PROTECTION ANALYSIS
RESEARCH REPORTS
DOCUMENT DOWNLOADS
VERIFICATION
ARCHIVE STATISTICS
SEARCH
CONTACT

———

7. HOMEPAGE

Create a powerful but academically restrained homepage.
Primary proposition:
A searchable documentary archive of the work, research, publications, testimony, correspondence and evidence assembled by Dr Richard William McLean / Barran Dodger.
Include:

- biography
- major works
- archive statistics
- timeline
- featured documents
- featured publications
- featured artwork
- research reports
- evidence centre
- latest additions
- verification tools
- search
- downloadable material
- external archive links

Create a prominent:

FORENSIC EVIDENCE CENTRE

with six major modules:

1. Alleged Crimes & Wrongful Acts
2. Laws, Rights, Ethics & Treaties
3. Institutions & Decision-Makers
4. Fraud Concept & Evidence Analysis
5. 35-Year Financial Impact
6. Protection / Asylum / Displacement Analysis

Every module must explain its methodology and evidentiary limitations.

———

8. ALLEGED CRIMES & WRONGS

Do NOT title or present this page as though every alleged offence has been legally established.

Preferred title:

ALLEGED CRIMES, WRONGS & POSSIBLE LEGAL VIOLATIONS — EVIDENCE INDEX

Create an evidence matrix:

CLAIM
DATE
EVENT
PERSON/ENTITY
AGENCY
DOCUMENT
SOURCE
CONDUCT ALLEGED
RELEVANT LAW
ELEMENTS OF POSSIBLE OFFENCE
EVIDENCE SUPPORTING
EVIDENCE AGAINST / COUNTER-EVIDENCE
OFFICIAL RESPONSE
JUDICIAL FINDING
OFFICIAL DETERMINATION
CURRENT STATUS
CONFIDENCE / EVIDENTIARY STATUS
RESEARCH REQUIRED

Use classifications:

- JUDICIALLY ESTABLISHED

- OFFICIALLY DETERMINED
- DOCUMENTED FACT
- CORROBORATED
- AUTHOR'S ALLEGATION
- POSSIBLE LEGAL CHARACTERISATION
- UNVERIFIED
- DISPUTED

Never label an individual or organisation "criminal", "corrupt", "fraudulent" or similar unless the underlying evidence establishes that characterisation through an appropriate authoritative finding.

Where the evidence raises a possible offence, state:

The evidence may warrant examination against the legal elements of [offence]. This page does not itself constitute a criminal finding.

---

9. ETHICS, HUMAN RIGHTS, LAWS & TREATIES

Create:

ETHICS, HUMAN RIGHTS, INTERNATIONAL LAW & POLICY — FORENSIC COMPLIANCE REVIEW

Catalogue relevant:

- human-rights principles
- disability rights
- procedural fairness
- natural justice
- administrative law
- privacy
- dignity
- equality
- non-discrimination
- access to justice
- freedom of expression
- whistleblower protections
- public-sector ethics
- professional ethics
- NDIS standards
- Australian legislation
- Commonwealth policy
- NSW legislation
- international treaties
- United Nations instruments
- professional codes

- institutional policies

For every instrument create:
NAME
JURISDICTION
DATE
SOURCE
RELEVANT PROVISION
RELEVANT PRINCIPLE
EVIDENCE
POTENTIAL ALIGNMENT
POTENTIAL INCONSISTENCY
COUNTER-EVIDENCE
OFFICIAL RESPONSE
DETERMINATION STATUS
RESEARCH LIMITATION
Do not claim a treaty or law was violated merely because conduct appears inconsistent with a principle.
Use wording such as:
The documented material raises a question as to whether the conduct is consistent with this provision.

———

10. INSTITUTIONS & DECISION-MAKERS

Create:

INSTITUTIONS, DECISION-MAKERS & PROFESSIONALS — EVIDENCE INDEX

Catalogue agencies, organisations, institutions, universities, schools, employers, professional bodies, tribunals, courts, regulators, service providers and individual decision-makers appearing in the documentary record.
For every entity:
NAME
TYPE
JURISDICTION
ROLE
DATE(S)
DECISION/ACTION
DOCUMENTARY SOURCE
DECISION-MAKER
REASON GIVEN

CONSEQUENCE DOCUMENTED
RESPONSE TO COMPLAINT
REVIEW/APPEAL
OUTCOME
EVIDENTIARY STATUS
POSSIBLE INTEGRITY ISSUE
COUNTER-EVIDENCE
RESEARCH STATUS
Do not create a page stating that all listed organisations "are corrupt."
Instead provide a forensic record of documented decisions and allow the evidence to be inspected.

---

11. FRAUD — CONCEPT & FORENSIC ANALYSIS

Create a major forensic module:

FRAUD — CONCEPT, LAW & EVIDENCE ANALYSIS

Explain distinctions between:

- fraud
- deception
- dishonesty
- false representation
- misleading conduct
- financial fraud
- corporate fraud
- registration fraud
- benefit fraud
- civil fraud
- administrative misconduct
- documentary falsification
- identity-related misconduct
- corruption
- abuse of process

Do not automatically classify conduct as criminal fraud.
For every alleged fraud event create:
CONDUCT
REPRESENTATION
ALLEGED FALSE STATEMENT
EVIDENCE OF FALSITY
KNOWLEDGE

INTENT
RELIANCE
LOSS
BENEFIT
LEGAL ELEMENTS
RELEVANT JURISDICTION
PRIMARY DOCUMENTS
COUNTER-EVIDENCE
OFFICIAL RESPONSE
INVESTIGATION
DETERMINATION
UNRESOLVED QUESTIONS
Create a homepage explanation:
“Fraud” is used here both as a legal concept requiring defined elements and as an investigative category for examining documentary inconsistencies. Inclusion in this index does not establish criminal liability.

---

12. 35-YEAR FINANCIAL IMPACT

Create:

35-YEAR FINANCIAL IMPACT & RESOURCE ANALYSIS

Analyse documented and potential financial consequences over approximately 35 years.
Separate:
DOCUMENTED COST
DOCUMENTED LOSS
DOCUMENTED PAYMENT
DOCUMENTED LIABILITY
ESTIMATED COST
HYPOTHETICAL COST
COUNTERFACTUAL COST
OPPORTUNITY COST
INSTITUTIONAL RESOURCE ESTIMATE
TAXPAYER IMPACT ESTIMATE
Do not present hypothetical expenditure as actual taxpayer expenditure.
Provide calculations for:
WEEK
MONTH
YEAR

5 YEARS
10 YEARS
20 YEARS
30 YEARS
35 YEARS
Include:

- assumptions
- source documents
- calculation methodology
- inflation assumptions where used
- uncertainty
- sensitivity analysis
- low scenario
- central scenario
- high scenario

Clearly label scenarios as estimates rather than established expenditure.

---

13. ASYLUM / REFUGEE / PROTECTION ANALYSIS

Create:

PROTECTION, ASYLUM, REFUGEE & INTERNAL DISPLACEMENT — FORENSIC LEGAL ANALYSIS

Distinguish:
REFUGEE
ASYLUM SEEKER
INTERNALLY DISPLACED PERSON
COMPLEMENTARY PROTECTION
HUMAN RIGHTS CLAIM
INTERNATIONAL PROTECTION CLAIM
INTERNAL RELOCATION
DOMESTIC DISPLACEMENT
Do not declare that the subject legally qualifies for refugee status unless an authorised body has made that determination.
Create an evidence matrix:
EVENT
LOCATION
DATE
THREAT/CONDUCT
ACTOR

DOCUMENT
CORROBORATION
STATE RESPONSE
ACCESS TO PROTECTION
INTERNAL RELOCATION POSSIBILITY
LEGAL STANDARD
EVIDENCE SATISFYING STANDARD
EVIDENCE NOT SATISFYING STANDARD
UNRESOLVED ISSUE
Create a separate distinction between:
DOCUMENTED DISPLACEMENT
CLAIMED DISPLACEMENT
LEGAL CHARACTERISATION
LEGAL DETERMINATION

---

14. MASTER EVIDENCE LEDGER

Create a central relational data model:
CLAIM
DOCUMENT
PERSON
ORGANISATION
EVENT
LAW
POLICY
RESPONSE
OUTCOME
COST
PUBLICATION
SOURCE
Connect records using stable IDs.
Example:
CLM-0001
DOC-0001
PER-0001
ORG-0001
EVT-0001
LAW-0001

CST-0001
PUB-0001
Every relationship should be traceable.

---

15. EVIDENCE GRAPH

Build an interactive evidence graph.
Allow users to select:
PERSON
DOCUMENT
EVENT
ORGANISATION
LAW
CLAIM
PUBLICATION
and see connected records.
Example:
PERSON → EVENT → DOCUMENT → AGENCY → DECISION → LAW → OUTCOME → COST
Every graph relationship must link to its underlying evidence.

---

16. TIMELINE

Create a searchable chronological timeline.
Allow filtering by:

- year
- decade
- agency
- person
- event type
- legal issue
- publication
- document
- evidence category

Each event should open its underlying documents.

---

17. DOCUMENT DATABASE

Create a document catalogue.
Metadata:
ID
TITLE
DATE
AUTHOR
RECIPIENT
AGENCY
DOCUMENT TYPE
JURISDICTION
TOPICS
KEYWORDS
FILE TYPE
FILE SIZE
SOURCE
ORIGINAL PATH
ARCHIVE PATH
HASH
TIMESTAMP
RELATED PEOPLE
RELATED ORGANISATIONS
RELATED EVENTS
RELATED CLAIMS
LEGAL TOPICS
PUBLICATION STATUS
EVIDENCE CLASSIFICATION

---

18. DOCUMENT VIEWER

Where technically possible, create an in-browser PDF/document viewer.
Provide:
OPEN
DOWNLOAD
SOURCE

METADATA
RELATED DOCUMENTS
RELATED CLAIMS
RELATED EVENTS
HASH
VERIFICATION
ARCHIVE LOCATION
Do not alter original documents.

---

19. SEARCH ENGINE

Build full-text and metadata search.
Search:
documents
people
organisations
events
laws
policies
publications
artworks
books
videos
claims
timeline entries
reports
Use filters and facets.
Search results must indicate evidence status.

---

20. ARCHIVE STATISTICS

Create a statistics page.
Do not hard-code claimed numbers as independently verified facts.
Where figures originate from the author’s own archive, label them:
Archive count reported by the project; subject to ongoing cataloguing and verification.

Support statistics such as:
TOTAL FILES
PDFS
OFFICIAL DOCUMENTS
CORRESPONDENCE
FORENSIC ANALYSES
TIMESTAMPS
BLOCKCHAIN RECORDS
PUBLICATIONS
VIDEOS
ARTWORKS
YEARS COVERED
AGENCIES REPRESENTED
COUNTRIES REPRESENTED
Update statistics automatically where technically possible from repository contents.

---

21. VERIFICATION SYSTEM

Create:

DOCUMENT VERIFICATION

Support:
SHA-256
SHA-512 where available
OpenTimestamps references where genuinely present
Blockchain references where genuinely present
Original filename
Repository path
Commit history
GitHub commit/date
Do not claim blockchain authentication merely because a file exists on GitHub.
Only display verification information that can actually be demonstrated.
Provide:
DOCUMENT HASH
CALCULATED HASH
STORED HASH
MATCH STATUS
TIMESTAMP
VERIFICATION SOURCE

---

22. ART & DIGITAL MUSEUM

Create an art section containing:

- artworks
- illustrations
- covers
- photographs where appropriate
- visual journalism
- graphics
- digital art
- books
- exhibitions
- artistic projects

Each artwork may include:

TITLE
DATE
MEDIUM
DIMENSIONS
DESCRIPTION
COLLECTION
PUBLICATION
RELATED DOCUMENTS
RELATED EVENTS
HIGH-RESOLUTION IMAGE
COPYRIGHT INFORMATION

Do not fabricate provenance.

---

23. BOOKS & PUBLICATIONS

Create a searchable library for:

books
academic papers
essays
reports
articles

chapters
manifestos
declarations
gospels
research papers
web publications
media appearances
For each item:
title
author
date
publisher
ISBN if available
edition
description
source
download
external publication link
citation information
related evidence

———

24. ACADEMIC REPOSITORY

Create an academic section capable of cataloguing:
PhD
Master’s work
research papers
conference papers
articles
methodological reports
ethics research
AI research
posthumanism research
global catastrophic-risk research
human-rights research
whistleblower research
Provide citation formats:
APA

MLA
Chicago
BibTeX
RIS where feasible.
Never fabricate publication metadata.

---

25. MEDIA CENTRE

Catalogue:
YouTube
interviews
articles
podcasts
television
radio
journalism
public statements
social publications
Use legitimate public links or embeds only.
Do not bypass access controls.

---

26. GOOGLE / EXTERNAL ARCHIVE IMPORT

If a connected Google Drive becomes available through an authorised integration, support importing metadata and files.
Never bypass:
passwords
authentication
permissions
CAPTCHA
paywalls
DRM
private access
Import should support:
deduplication

hashing
metadata extraction
document classification
folder mapping
source tracking
privacy classification
original location preservation

---

27. DIGITAL VAULT

Where the Digital Vault is publicly accessible, integrate it as an external source.
Do not pretend that an external application is part of GitHub unless it actually is.
Clearly label:
GITHUB ARCHIVE
EXTERNAL ARCHIVE
DIGITAL VAULT
LIVE APPLICATION
MIRROR

---

28. PRIVACY & SENSITIVE INFORMATION

Before exposing a document publicly, classify it:
PUBLIC
PUBLIC WITH REDACTION
RESEARCH USE
RESTRICTED
PRIVATE
DO NOT PUBLISH
Potentially sensitive information must not automatically be exposed merely because it exists in the repository.
Flag:
personal addresses
phone numbers
private email addresses
financial account details

medical information
identity documents
third-party personal information
passwords
API keys
authentication tokens
private correspondence
unpublished sensitive information
Never publish secrets.
Scan source code and repository content for accidentally exposed API keys and credentials.

---

29. LEGAL / DEFAMATION SAFEGUARDS

Every potentially accusatory page must contain an evidence-status system.
Do not state:
“X committed a crime”
unless supported by an authoritative finding.
Prefer:
“The archive contains an allegation that…”
“The documents record…”
“The available material appears consistent with…”
“The evidence raises a question whether…”
“No judicial finding has been identified in the material reviewed.”
“The allegation is disputed.”
“The matter remains unresolved.”
“Further independent investigation would be required.”
This is a research archive, not a court.

---

30. SOURCE HIERARCHY

Create a visible source hierarchy:
LEVEL 1 — JUDICIAL / OFFICIAL DETERMINATION
LEVEL 2 — PRIMARY GOVERNMENT RECORD
LEVEL 3 — CONTEMPORANEOUS PRIMARY DOCUMENT
LEVEL 4 — INDEPENDENT CORROBORATION

LEVEL 5 — AUTHOR'S DOCUMENTED ACCOUNT
LEVEL 6 — SECONDARY SOURCE
LEVEL 7 — INTERPRETATION
LEVEL 8 — SPECULATION / UNVERIFIED CLAIM
The interface must make this distinction visible.

---

31. RESEARCH METHODOLOGY

Create:

RESEARCH METHODOLOGY

Explain:
documentary analysis
source criticism
triangulation
chronological analysis
cross-document comparison
legal-element analysis
policy comparison
ethical analysis
financial modelling
counterfactual analysis
uncertainty analysis
corroboration
falsification attempts
alternative explanations
negative evidence
missing evidence
disputed evidence
research limitations
The website must explicitly encourage readers to test the evidence rather than simply accept conclusions.

---

32. MASTER RESEARCH REPORT

Create a central research report that synthesises the archive.

Structure:
ABSTRACT
RESEARCH QUESTION
BACKGROUND
METHOD
SOURCE CORPUS
CHRONOLOGY
DOCUMENTARY FINDINGS
INSTITUTIONAL PATTERNS
LEGAL ANALYSIS
ETHICAL ANALYSIS
HUMAN RIGHTS ANALYSIS
FINANCIAL ANALYSIS
PROTECTION / DISPLACEMENT ANALYSIS
FRAUD-RELATED ANALYSIS
COUNTER-EVIDENCE
ALTERNATIVE EXPLANATIONS
LIMITATIONS
UNRESOLVED QUESTIONS
CONCLUSION
REFERENCES
APPENDICES
The report must distinguish documentary findings from interpretation.

---

33. CHRISTIAN / THEOLOGICAL MATERIAL

Where the archive contains theological, biblical, prophetic or Christian material, create a dedicated section.
Do not present theological interpretation as empirical fact.
Distinguish:
SCRIPTURAL TEXT
HISTORICAL INTERPRETATION
THEOLOGICAL INTERPRETATION
AUTHOR'S INTERPRETATION
DOCUMENTARY PARALLEL
COINCIDENCE / SYNCHRONICITY
UNRESOLVED INTERPRETATION
The archive may preserve the author's theological interpretation while allowing readers to

independently assess it.

---

34. SEO

Generate:
unique page titles
meta descriptions
canonical URLs
OpenGraph metadata
Twitter/X metadata
structured data
Schema.org where appropriate
sitemap.xml
robots.txt
breadcrumb schema
article schema
book schema
person schema where appropriate
creative work schema
dataset schema where appropriate
Do not create misleading SEO claims.

---

35. ACCESSIBILITY

Target WCAG 2.2 AA where technically practical.
Include:
keyboard navigation
screen-reader labels
semantic HTML
alt text
high contrast
focus states
skip navigation
accessible tables
accessible graphs

accessible PDF links
reduced-motion support
mobile accessibility

---

36. RESPONSIVE DESIGN

The entire system must work on:
iPhone
Android
tablet
desktop
large screens
Use responsive layouts.
Avoid unnecessarily heavy animations.
Prioritise fast loading.

---

37. PERFORMANCE

Optimise:
images
PDF loading
search indexing
JavaScript bundles
lazy loading
route loading
fonts
metadata
caching
Do not load the entire evidence corpus into the browser at once.

---

38. GITHUB PAGES

Configure deployment for GitHub Pages.
Determine automatically whether the existing project uses:
Vite
React
Next.js
Astro
plain HTML
Jekyll
or another architecture.
Prefer the smallest stable architecture compatible with the existing repository.
If changing frameworks is necessary, preserve the existing archive.
Configure:
GitHub Actions
build
test
deploy
404 page
SPA routing where required
asset paths
base path
custom domain support where appropriate

---

39. GITHUB ACTIONS

Create automated workflows capable of:
building
testing
linting
checking links
checking metadata
generating sitemap
generating archive statistics
checking duplicate files
checking missing metadata
checking broken evidence references
checking secrets
deploying GitHub Pages
Do not automatically publish newly discovered sensitive documents.

---

40. AUTOMATED ARCHIVE INDEX

Create a script that scans the repository and generates structured metadata.

For example:

```
/scripts/index-archive
```

Output:

```
/data/documents.json
/data/artworks.json
/data/publications.json
/data/people.json
/data/organisations.json
/data/events.json
/data/claims.json
/data/laws.json
/data/timeline.json
/data/statistics.json
```

Do not destroy manually curated metadata.

Use stable IDs.

---

41. DUPLICATE DETECTION

Detect duplicate files using:

SHA-256

filename similarity

file size

metadata

content similarity where practical

Never delete duplicates automatically.

Create:

DUPLICATE

POSSIBLE DUPLICATE

UNIQUE

UNKNOWN

---

42. EVIDENCE CHAIN

Every claim should be traceable:

CLAIM
↓
DOCUMENT
↓
SOURCE
↓
DATE
↓
EVENT
↓
PERSON / ORGANISATION
↓
LAW / POLICY
↓
RESPONSE
↓
OUTCOME
↓
COST

This chain should be visible on relevant pages.

---

43. “FOLLOW THE EVIDENCE” INTERFACE

Create a prominent interface allowing users to select:

FOLLOW CLAIM
FOLLOW DOCUMENT
FOLLOW PERSON
FOLLOW ORGANISATION
FOLLOW EVENT
FOLLOW LAW

FOLLOW COST
FOLLOW PUBLICATION
Each path should expose the underlying records.

---

44. DOWNLOAD CENTRE

Create downloadable:
PDFs
reports
research papers
datasets
indexes
timelines
metadata
CSV files where appropriate
JSON datasets where appropriate
Do not generate fictional documents.

---

45. PUBLICATION EXPORT

Where possible allow a research page to export as:
PDF
print view
Markdown
citation
bibliographic record

---

46. SEARCHABLE EVIDENCE TABLE

Create an advanced evidence table with:
ID
DATE

TYPE
SOURCE
PERSON
ORGANISATION
EVENT
CLAIM
LAW
STATUS
DOCUMENT
VERIFICATION
Allow filtering and sorting.

---

47. EVIDENCE STATUS BADGES

Use consistent badges:
FACT
PRIMARY SOURCE
OFFICIAL RECORD
JUDICIAL FINDING
CORROBORATED
ALLEGATION
INFERENCE
INTERPRETATION
DISPUTED
UNVERIFIED
RESEARCH QUESTION
Do not use colours alone to convey meaning.

---

48. PUBLIC RESEARCH DISCLAIMER

Create a concise standard notice:
This archive presents documentary material for public research, historical documentation and independent scrutiny. Inclusion of a person, organisation, allegation, event or legal concept does not by itself establish wrongdoing or legal liability. Evidentiary status is identified wherever practicable, and readers are encouraged to inspect the underlying

primary materials, consider counter-evidence and distinguish documented facts from allegations, inference and interpretation.

---

49. CONTACT / CORRECTION MECHANISM

Create:
CONTACT
CORRECTION REQUEST
SOURCE CHALLENGE
DOCUMENT CORRECTION
RIGHT OF REPLY
RESEARCH ENQUIRY
Where appropriate, allow a documented response to be attached to the relevant evidence record.
Do not silently alter historical records.
Record corrections transparently.

---

50. VERSION CONTROL

Use Git history as an archival layer.
Where practical expose:
commit
date
change
file
version
hash
Do not claim that Git history proves the truth of a document's contents.
It establishes repository history, not necessarily factual accuracy.

---

51. DESIGN

Visual identity:
serious
archival
academic
documentary
human-rights oriented
modern
high-trust
accessible
Use strong typography and clear information hierarchy.
Avoid sensationalist presentation.
Use evidence/status indicators consistently.
The website should feel like a combination of:
digital museum
university research archive
public records library
forensic database
documentary investigation

---

52. NO FABRICATION RULE

ABSOLUTELY DO NOT INVENT:
documents
people
events
quotes
laws
legal findings
court decisions
government findings
awards
academic publications
statistics
financial figures
corroboration
citations
sources
URLs

testimony
institutional motives
criminal conduct
causal relationships
If information cannot be established from the repository or a verified external source, label it:
UNKNOWN
UNVERIFIED
CLAIMED
REQUIRES SOURCE

---

53. EXTERNAL RESEARCH

Where external research is required:

- use legitimate public sources
- prefer primary government sources
- prefer court records
- prefer legislation
- prefer official institutional publications
- record source URLs
- record access dates
- distinguish external evidence from archive evidence
- do not bypass access controls

Do not silently incorporate external material into the author's archive as though it originated there.

---

54. MASTER DATA RELATIONSHIP

Implement:
Person ↔ Event
Person ↔ Document
Person ↔ Organisation
Organisation ↔ Event
Organisation ↔ Document
Event ↔ Document
Event ↔ Law
Claim ↔ Document

Claim ↔ Person
Claim ↔ Organisation
Claim ↔ Event
Claim ↔ Law
Claim ↔ Cost
Publication ↔ Document
Publication ↔ Person
Publication ↔ Event

---

55. INITIAL BUILD PRIORITY

DO NOT attempt to build every feature in one operation.
FIRST BUILD ONLY:

1. Inspect repository
2. Preserve existing archive
3. Create architecture
4. Create specifications
5. Create data schemas
6. Create BUILD_STATUS
7. Create design system
8. Create navigation
9. Create homepage shell
10. Create evidence-status components
11. Create document/article/card components
12. Create basic search framework
13. Create GitHub Pages deployment
14. Create archive inventory
15. Run tests
16. Fix errors
17. Update BUILD_STATUS

STOP.
Do not proceed to all forensic modules during the first build.

---

56. SUBSEQUENT BUILD COMMAND

When I subsequently say:
CONTINUE FROM BUILD STATUS

you must:

1. Read BUILD_STATUS.md.
2. Inspect what already exists.
3. Continue with the next incomplete phase.
4. Do not rebuild completed work.
5. Do not unnecessarily consume resources.
6. Test the implementation.
7. Fix errors.
8. Update BUILD_STATUS.md.
9. Stop.

---

57. BUILD PHASES

Use these phases:

PHASE 1 — Architecture
PHASE 2 — Archive Inventory
PHASE 3 — Data Model
PHASE 4 — Document Library
PHASE 5 — Search
PHASE 6 — Timeline
PHASE 7 — Evidence Graph
PHASE 8 — Forensic Evidence Centre
PHASE 9 — Legal / Human Rights / Ethics
PHASE 10 — Institutions & Decision-Makers
PHASE 11 — Fraud Analysis
PHASE 12 — Financial Analysis
PHASE 13 — Protection / Displacement Analysis
PHASE 14 — Art Museum
PHASE 15 — Books / Publications / Academic Repository
PHASE 16 — Media Centre
PHASE 17 — Verification
PHASE 18 — Research Reports
PHASE 19 — SEO / Accessibility
PHASE 20 — Performance
PHASE 21 — Security / Privacy
PHASE 22 — Automated Testing
PHASE 23 — GitHub Pages Deployment
PHASE 24 — Final Audit

---

58. FINAL FORENSIC AUDIT

Before declaring the site complete, perform:
ARCHIVE AUDIT
LINK AUDIT
DOCUMENT AUDIT
METADATA AUDIT
EVIDENCE-STATUS AUDIT
LEGAL-CAUTION AUDIT
PRIVACY AUDIT
SECURITY AUDIT
ACCESSIBILITY AUDIT
SEO AUDIT
PERFORMANCE AUDIT
MOBILE AUDIT
GITHUB PAGES AUDIT
SOURCE-CITATION AUDIT
NO-FABRICATION AUDIT
Check every page for unsupported certainty.

---

59. FINAL PRINCIPLE

The website must not tell visitors what they must believe.
It must allow them to:
LOOK
READ
SEARCH
TRACE
COMPARE
VERIFY
QUESTION
CORROBORATE
CHALLENGE
RESEARCH
and reach their own informed conclusions.

The central design principle is:
FOLLOW THE EVIDENCE.
Build the system around documentary transparency rather than rhetorical certainty.
BEGIN WITH PHASE 1 ONLY.

How I would use this

If you're using a GitHub-connected AI coding agent, paste the **whole command** above as the initial instruction.
Then, after it finishes Phase 1, simply give it:
CONTINUE FROM BUILD STATUS. Execute Phase 2 only. Do not rebuild completed work.
Then repeat that for each phase.
That approach is particularly useful for your archive because the repository can remain the **source of truth**, while the website becomes the interface through which people explore the evidence.
