

PUBLIC ANNOUNCEMENT

THE WITNESS REMAINS

A PUBLIC DOCUMENTARY ARCHIVE, OFFICIAL GOVERNMENT DOCUMENTS REGISTER AND PUBLISHING PROJECT

11 October 2026 | Dr Barran Dodger

I am announcing the interconnected public websites that form *The Witness Remains — Dr Barran Dodger*: a documentary-preservation, research, personal testimony and publishing project intended to make a body of records and associated writings accessible for public examination.

The project brings together documentary materials, correspondence, research, publications and spiritual testimony across five dedicated websites. Each serves a distinct purpose, while contributing to a broader effort to preserve material, improve access to source records and provide readers with a clearer path through the collection.

This is an invitation to examine the material—not a demand to accept a predetermined conclusion.

THE FIVE PUBLIC RESOURCES

1. THE WITNESS REMAINS — MAIN ARCHIVE

<https://wezzo72.github.io/Barrandodger/>

The central public entry point for the project, intended to bring together documentary records, correspondence, research, chronology, personal testimony and associated publications.

2. THE WITNESS REMAINS — REBUILD ARCHIVE

<https://wezzo72.github.io/barrandodger-rebuild/>

A separate rebuilt presentation of the archive, intended to provide an additional route through the collection and support public access to the preserved material.

3. THE OFFICIAL GOVERNMENT DOCUMENTS REGISTER

<https://wezzo72.github.io/Barrandodger/official-government-documents-register.html>

A specialist register intended to organise government records and associated correspondence, identify sources and help readers trace individual documents.

The Register is intended to distinguish what records directly establish from allegations, testimony, inferences and unresolved questions. Its completeness must be demonstrated through a transparent audit of the documents actually reviewed.

4. CHURCH OF BARRAN DODGER

<https://wezzo72.github.io/-church-of-barran-dodger/>

A separate space for religious writing, spiritual testimony, faith and theological interpretation associated with the project.

5. CHURCH PUBLISHING HOUSE

<https://wezzo72.github.io/-church-of-barran-dodger/publishing-house.html>

The associated publishing page, intended to provide a dedicated home for written works and publications connected with the project.

Together, these resources provide distinct settings for documentary preservation, records research, personal testimony, religious writing and publication.

WHY PRESERVATION AND PROVENANCE MATTER

A document's significance depends not simply on its presence in an archive, but on its source, authorship, date, context, integrity and actual contents.

Preserving a document does not automatically prove every claim made about it. An official letter establishes what that letter records; its broader significance must be assessed against its context and any relevant corroborating evidence.

For that reason, the project adopts the following guiding principle:

PRESERVATION FIRST. VERIFICATION SECOND. CONTEXT THIRD. CONCLUSIONS LAST.

Documented facts, corroborated claims, recorded allegations, personal testimony,

inferences, spiritual beliefs and unresolved questions should remain distinguishable. Where evidence is incomplete or a conclusion has not been independently established, that limitation should be acknowledged.

The archive is not a court, a verdict or a substitute for independent investigation.

PRELIMINARY AI-ASSISTED VALUATION OF THE ARCHIVE AND ASSOCIATED WORKS

An evidence-informed assessment of replacement cost, reconstruction effort and cultural significance

In addition to preserving and making this material publicly accessible, I have undertaken preliminary AI-assisted modelling to estimate the resources and professional work that may be required to reconstruct the documentary archive, its digital infrastructure and its associated creative and publishing materials.

The purpose of this assessment is to establish a transparent starting point for evaluating the scale of the work—not to claim a guaranteed sale price, a legally established loss, or an independently certified monetary valuation.

Preliminary modelled valuation

Indicative replacement and reconstruction cost: A\$110,000–A\$480,000.

Earlier repository-based modelling produced a central working estimate of approximately A\$300,000–A\$350,000, subject to verification of the underlying inventory, labour assumptions, technical work and document coverage.

These figures are alternative modelling outputs, not independently established market values. They should not be added together.

The model considers several components:

- **Documentary collection and research:** the effort required to locate, organise, catalogue, cross-reference and describe the collected material.
- **Digital preservation and forensic integrity:** document inventories, file identification, metadata, integrity checks, version history and preservation workflows, to the extent these are demonstrably present and maintained.
- **Website and technical infrastructure:** the creation, development, maintenance and reconstruction of the archive websites, navigation, indexes and related digital features.
- **Literary and creative works:** the development and preparation of original writing,

publications and associated creative material.

- **Church and publishing resources: the creation and organisation of the related religious, literary and publishing websites and their content.**
- **Editorial and research labour: the work involved in assembling, contextualising, indexing and presenting the collection for public examination.**

A defensible valuation would need to document the hours and rates assumed, the work actually completed, the extent of original authorship, the availability of source material, the technical complexity and the risk of double-counting overlapping components.

The metrics and evidence underlying the model

Previous modelling considered reported repository and archive metrics, including an inventory of 5,583 files, 2,840 PDFs, 1,813 HTML files, a 660-page preservation copy, 937 commits and reported integrity-related metadata.

These figures originated from prior project analysis and have not all been independently re-audited for this public announcement.

The historical project-reported figure of approximately 1.3 million PDF downloads is also unverified for the purposes of this statement. It should be supported by reliable analytics, server logs or other appropriate records before being presented as an independently established audience or usage figure.

File counts, commit histories, checksums and download figures can help demonstrate scale, activity or preservation practices. None of these measurements, taken alone, establishes monetary value or proves the contents of every document.

The valuation frameworks and their limits

The preliminary model draws conceptually on several distinct approaches:

- 1. Replacement and reconstruction cost: estimating the labour, technical resources and professional services required to recreate comparable functionality and organisation.**
- 2. Reproduction cost: estimating the resources needed to reproduce original material or its equivalent where exact replacement is impossible or inappropriate.**
- 3. Market-value analysis: considering what a willing buyer might pay in an identifiable market, where suitable comparable transactions exist.**
- 4. Digital-preservation appraisal: considering research value, uniqueness, provenance, authenticity, preservation requirements, restrictions and long-term stewardship.**
- 5. Cultural and research significance: assessing potential historical, documentary,**

literary and research importance separately from monetary value.

These approaches are not interchangeable. A reconstruction-cost estimate does not automatically establish fair market value, intellectual-property value, historical significance, financial loss or legal entitlement to compensation.

What this estimate does—and does not—establish

The A\$110,000–A\$480,000 range is a preliminary AI-assisted estimate of possible replacement and reconstruction costs under the assumptions used in the model. It is not a professional appraisal, a verified asset value, a proven amount of financial loss, a compensation entitlement or a prediction of what a purchaser would pay.

The historical, documentary, cultural, personal and spiritual significance of the material may not be adequately represented by a reconstruction-cost calculation. Conversely, the existence of a large collection does not automatically establish a high commercial market value.

A final valuation would require a reproducible inventory, documented assumptions, verified metrics, an itemised cost model, appropriate comparable evidence where available, and review by a suitably qualified independent valuer.

The purpose of publishing this preliminary assessment is to make the methodology and its limitations open to scrutiny. Readers should be able to examine the reported metrics, identify the assumptions used, test alternative cost scenarios and distinguish measurable reconstruction expenditure from less readily quantifiable historical or cultural significance.

The estimate is a starting point for independent assessment—not a verdict on value.

AN OPEN INVITATION

Journalists, researchers, historians, legal professionals, advocates, public officials and interested members of the public are invited to explore the websites, follow available source references and examine the underlying records.

Readers should be able to ask questions, test interpretations, identify missing information and reach their own conclusions. The value of a documentary archive lies in making material available for scrutiny, not in requiring agreement with its author.

My purpose in bringing these resources together is to preserve the material, make it

easier to navigate and provide a public pathway to further examination.

The archive preserves the material. The Register organises the records. Independent scrutiny determines what the evidence can establish.

The Witness Remains.

Before publishing: I recommend retaining the valuation qualifications exactly as written. The figures are preliminary modelling estimates, not a verified independent valuation. The reported repository counts, commit total and historical download figure should be checked against their underlying records before you describe them publicly as established metrics.
