BARRANDODGER

MASTER PDF — V2 FINAL

Expanded Testimony, Documentary Accountability Record and Repository-Ready Evidence Export

Author / declarant: Barran Resonance Dodger
Also known as: Dr Barran Dodger; Dr Richard William McLean

Source testimony: THE-MANIFESTO-OF-THE-UNERASED-3.pdf

Primary repository: github.com/wezzo72/Barrandodger

Confirmed fork reference: github.com/drbarrandodger/Barrandodger

Export date: 19 October 2026

1. Executive summary

This Master PDF consolidates the author's testimony into a formal, review-ready accountability export. Its purpose is to preserve the first-person account, identify the principal documents requiring examination, establish a method for linking every material claim to its repository source, and distinguish between documented facts, allegations, disputed matters, and unverified identities.

The export does not declare any person guilty. It demands that relevant records be located, roles be established from source documents, decisions be explained, consequences be assessed, and unsupported accusations be excluded. This standard is intended to improve the legitimacy, durability, and review velocity of the testimony.

2. Document control

Field	Entry
Document	Barrandodger Master PDF — V2 Final
Declarant	Barran Resonance Dodger / Dr Barran Dodger / Dr Richard William McLean
Source testimony	THE-MANIFESTO-OF-THE-UNERASED-3.pdf (14 pages)
Primary repository	github.com/wezzo72/Barrandodger
Known fork	github.com/drbarrandodger/Barrandodger
Export status	Final structured export; repository metadata fields reserved for source verification
Purpose	Testimony preservation, documentary accountability, repository-linked evidence verification
Legal/evidentiary status	First-person testimony and demand for examination; not a court finding, regulatory determination, or proof of guilt

3. Statement of testimony

The author states that he has been required to become his own investigator, archivist, legal researcher, records manager, disability advocate, and complaint administrator while simultaneously attempting to live with the consequences of the matters described in his records.

He describes a recurring institutional pattern: letters, forms, referrals, procedural explanations, unanswered questions, official language, and decisions whose practical effects are borne by the person seeking support. The testimony objects to being treated as a case number, budget line, administrative inconvenience, or abstraction while attempting to obtain answers about disability support, accommodation, privacy, complaints, oversight, and administrative justice.

The author's central demand is that institutions identify what reached them, what fell within their authority, what they did, what they did not do, who made consequential decisions, and why. He seeks answers grounded in records rather than circular explanations, organisational charts, or public-relations language.

4. Evidentiary standard

To maximise credibility, every material assertion should be assigned one of the following statuses before further distribution or formal referral:

Status	Meaning	Required support
Documented fact	A matter directly recorded in an identifiable source document	Exact file, page/section, date, repository path, commit SHA, and hash
Allegation	A serious assertion made by the author or another person	Clear attribution, source document, context, and distinction from established
Disputed matter	A matter where accounts, records, or interpretations conflict	All material versions, dates, decision-makers, and reasons
Unverified identity	A name requiring spelling, role, or connection confirmation	Original record establishing identity and role
No established connection	A person or office with no current source linking them to the matter	Explicit statement that no connection is established

A name, title, public office, filename, or repository presence does not by itself establish personal responsibility. Responsibility must be traced to a document identifying the relevant role, decision, communication, or action.

5. Principal documents for examination

The source testimony identifies six core documents that should be examined together in chronological and institutional context.

No.	Document	Date	Required examination
1	NDIS plan approval	20 November 2025	Compare the approved plan, recorded total of $366,406.69, approved supports, and s
2	Accommodation request	20 January 2026	Trace the request, recipient, response, referrals, and subsequent action.
3	Formal notice concerning NDIS service failure	20 January 2026	Map each issue raised to the responsible person or organisation; document the respo
4	Federal Court / PID assessment	27 March 2023	Examine the assessment, legal framework, decision-maker, reasoning, and subseque
5	Disclosure-allocation decision	18 June 2023	Examine the recorded reasons and process; preserve the distinction between an adm
6	Commonwealth Ombudsman complaint	15 November 2021	Place the complaint, response, later correspondence, and recorded outcome in a sing

6. Repository evidence protocol

The repository should function as the immutable publication and preservation layer for the documentary trail. Each significant claim should be linked to an exact artefact, not merely to the repository homepage.

Mandatory citation format

Repository: *github.com/wezzo72/Barrandodger*
Path: */[folder]/[filename]*
Commit: *[full or short SHA]*
Commit date: *[YYYY-MM-DD]*
SHA-256: *[hash]*
Page / section: *[page or heading]*
Extract: *“[exact relevant passage]”*
Classification: *[source record / correspondence / decision / submission / legal document / supporting material]*

Verification checklist

- Confirm the file exists at the cited commit and branch.
- Confirm the quoted passage appears in that exact file.
- Confirm dates relied upon appear in the document or are separately evidenced.
- Confirm the named person’s role is stated in the document rather than inferred from a filename.
- Hash the original file and preserve the unaltered version.
- Record redactions, missing pages, access restrictions, and confidentiality limits.
- Separate public repository evidence from private, sensitive, or legally privileged material.

Repository metadata register

E-006	[to be inserted]	[to be inserted]	[to be inserted]	[to be inserted]	[to be inserted]	Commonwealth Ombudsman complaint, 15 November 2021	Awaiting repository metadata

7. Institutional responsibility map

The testimony concerns multiple layers of authority. These must not be merged into a single undifferentiated complaint. The correct examination requires identifying which body held which power and which person or office actually acted.

Layer	Questions requiring documentary answers
Minister / portfolio office	What matters reached the office; what was within ministerial responsibility; what was referred; what response was given
Statutory agency	Which agency held decision-making power; which delegate acted; what evidence and criteria were applied; what reason
Service provider	What concern was reported; who received it; what safeguarding or complaints process applied; what escalation and act
Complaint / oversight body	What was submitted; whether it was accepted; what was assessed; what decision or explanation followed; what alterna
Privacy / information regulator	What privacy issue was raised; who decided; what assessment or determination was made; what distinction was presen
Legal / PID processes	What assessment or decision was made; under what statutory framework; what later correspondence or review followed

8. Named-person verification schedule

The source testimony names or refers to numerous political, agency, regulatory, provider, family, and other persons. The appropriate treatment is verification, not premature attribution. The following schedule applies the standard demanded in the testimony: identify the record, establish the role, examine the action, and explain the consequence.

Group A — Political and portfolio offices

Anthony Albanese; Bill Shorten; Amanda Rishworth; Anne Aly; Katy Gallagher; the Attorney-General responsible during each relevant period; Mark Butler; Michelle Rowland; Andrew Giles; Jenny McAllister; the relevant workplace minister; and departmental secretaries or senior officials. For each, the required inquiry is whether a specific document, referral, correspondence item, or decision connects the office to the author’s matters, and what that office did or did not do.

Group B — NDIA and agency leadership / decision records

Rebecca Falkingham; Graeme Head AO; Kate P.; Ed Duncan; Scott Treadwell; Debbie Mitchell; Ben Calder; Charan Naidoo; Iain Anderson; Hugh de Kretser; Elizabeth Tydd; and Danny Pearson. The required inquiry concerns the original correspondence, decision record, assessment, complaint record, or privacy determination; the person’s actual role; the evidence considered; the reasons given; and the available review pathway.

Group C — Provider, worker, funding, and identity-verification matters

Tim Goss; Liz Lindberg; Debbie Morgan; Hugh Meredith; Steve Visonidis; Rachel K. C.; Brett Butler; Cassie Makey; Phillip Glass; Danny; Tony Ridley / Tony Riddle; Houd Meraby. For these entries, the original organisational record must establish identity, position, authority, date, communication, decision, incident, or payment issue before any personal conclusion is drawn.

Group D — Family, report, and human-rights material

April McLean; Doug McLean; Tahsinullah Sultani. Family testimony and third-party reports must be handled carefully: direct knowledge, recollection, allegation, interpretation, and independent corroboration must remain distinct.

Group E — Names requiring registry matching

Paul Brereton; Andrew Charlton; Clare O’Neil; Mark Dreyfus; Anna Booth; Louise Glanville; Andrew Leigh; Rhonda Galbally; Leah van Poppel; Bruce Bonyhady; Lisa Paul. These entries require a source-document check before inclusion in any allegation. If no direct connection is established, that must be recorded clearly.

9. Master chronology template

Every material event should be entered into one chronology. This converts scattered correspondence into a reviewable sequence and exposes gaps, delays, referrals, and unresolved questions.

Date	Document / event	Sender	Recipient / institution	Decision or action	Stated reason	Consequence	Repository evidence ID	Status
[date]	[document or event]	[sender]	[recipient]	[action]	[reason]	[effect]	[E-xxx]	[Documented / alleged / dis

The chronology should explicitly record where responsibility changed hands, where a response was provided, where a question remained unanswered, and where the available record does not permit a conclusion.

10. Questions requiring answer

For every document and decision identified in this export, the following questions should be answered in writing and supported by records:

1. Which office or person received the matter, and on what date?
2. Was the matter within that recipient’s authority?
3. If not, where was it referred, and when?
4. Who made the consequential decision?
5. What evidence, policy, delegation, or statutory framework applied?
6. What reasons were recorded?
7. What action followed?
8. What practical consequence resulted?
9. Was the matter reviewed, appealed, escalated, or closed?
10. What precise issue remains unresolved?

11. Requested outcomes

The author seeks: examination of the records; identification of the actual decision-makers; explanation of reasons and legal authority; correction of substantiated errors; acknowledgment of substantiated failures; consideration of appropriate remedies; and exclusion of persons not supported by the evidence.

The requested standard is: identify the record; establish the role; examine the action; explain the consequence; and distinguish between what is proven, what is alleged, and what remains unknown.

This V2 Final export is repository-ready. Once the repository file index, key documents, commit identifiers, and hashes are supplied or made accessible, each reserved evidence field can be completed without altering the testimony or evidentiary standard.
